Back End: Java, Node.js, Express.js, MongoDB, C/C++, Swift, PHP, Python  
Tools: Git, Perforce, Jest/JUnit, Protractor/Jasmine, Atom, Jenkins, JIRA, AWS

## EXPERIENCE

---

### SAP

*Software Engineering Intern*

Vancouver, BC

September 2018 | August 2019

- Implemented key features that increased the efficiency of SAP's new Help Portal
- Polished SAP's Hybris-themed websites by running and fixing code on different platforms and browsers
- Achieved many stakeholder objectives by establishing a more customized version of the SAP DITA Open Toolkit
- Ensured stability and reliability of SAP's User Assistance Content Platform by writing JavaScript scripts to automate UI tests

### Mount Pleasant Business Improvement Area

*Marketing Coordinator Intern*

Vancouver, BC

January 2017 | April 2017

- Updated the company's spreadsheets regarding property listings around the area
- Surveyed business owners within Mount Pleasant which led to a efficient draft of creative solutions used to fix community problems and improve businesses all around

### NWPlus

*Co-Director of Logistics*

Vancouver, BC

September 2016 | April 2018

- Accelerated membership sign-ups by promoting non-stop before school, during school, and after each term has ended
- Mentored new members of the club by demonstrating how to take care of different situations, how to meticulously ensure the success of each event, how to book rooms and how to order food
- Assisted in creating and sending sponsorship packages for the club's flagship event which lead to exceeding the club's goal in terms of budget planning

## PROJECTS

---

### Yelp Camp HTML5, CSS3, JavaScript, Node.js, MongoDB, REST API

<https://github.com/chriscebrero/YelpCamp>

An application in which its purpose is similar to Yelp except instead of restaurants, it'll be catered towards campgrounds. This project focused more on authentication and authorization, with users being able to upload, set the cost, rate campgrounds, and having limited ability on what they can achieve on their profile

### Warbler HTML5, CSS3, React, Redux, MongoDB, JWT Web Token, REST API

<https://github.com/chriscebrero/WarblerApp>

A message board application that is catered towards groups of friends that want to leave messages, organize events, upload pictures, and more. Users can register, in which their information is saved onto a database, and post/edit/delete messages onto a board where everyone can see

### Cook It! HTML5, CSS3, React, Node.js

<https://github.com/chriscebrero/RecipeApp>

A utilization application that displays a list of saved recipes, their ingredients, baking instructions, and adjustable serving size. Users can upload their own recipes which can then be accessed on a later time if they need an idea on what to cook

## EDUCATION

---

### University of British Columbia

BA Combined Mathematics & Computer Science

Vancouver, BC

September 2014 - December 2020
